

# CTEDDI

## Local Implementation Model

The Career and Technical Educators Using a Data-Driven Improvement (CTEDDI) model was originally researched, developed, and instituted as a statewide initiative. State departments of education have opted for this type of model.

The increasing visibility and success of the statewide model have resulted in additional requests for technical assistance from smaller groups of schools and even single school districts and/or community colleges. We are pleased to now offer a local implementation model!

To implement CTEDDI in only one school entity, a facilitator needs to be trained by the CTEDDI staff. This person may be hired part time for the CTEDDI initiative or might be a member of the CTEDDI team.

### The facilitator would conduct the following sessions during the school year:

- An introductory session in August or September to explain the year-long continuing process and set up student technical skill assessments
- A day-long workshop in October or early November in which educators summarize observations from new data, draw conclusions, and transfer them to an action plan
- Two sessions between November and March to monitor the classroom implementation of the plan supplemented by periodic mentoring of teachers
- One concluding session in May to review the value of using longitudinal data and continued participation in an ongoing process

## Components of the Local CTEDDI Model:

- PowerPoint™ and participant hard copy workbooks, plus PDF files
- Pre- and optional posttests from NOCTI
- Trained facilitator
- Facilitated on-site workshop
- Facilitator mentoring of each team member electronically with two webinar calls with the entire team; use of post-workshop activities
- Access to Sharing Center

## Cost Information:

- Pretests and state/school/classroom reporting to assess secondary students in October 2013-May 2014 at a rate of \$10.00 per student; optional posttests at a rate of \$12.00, the number of students as indicated by the coordinator. (Estimate 12 students per program x 5 programs)
- Standard total per school (including a maximum of 5 content areas without posttesting) = \$2,650.00. Posttesting is also available at a slightly higher cost.
